

Update: June 2022

Here's a look at some of the equipment the Hospital Futures committee has purchased in the past year.

- A bladder scanner - used everyday to determine if a patient's abdominal pain is caused by a bladder issue or something else.
- A new transport stretcher.
- New safer chairs for the long term care dining room
- New blinds in the LTC dining room.

We are fortunate to have the Hospital Auxiliary as a partner in some purchases and we are very grateful for the great work they do in the community.
